Natural Ledger

Natural Suite's *Natural Ledger* General Ledger system is the heart of an automated accounting system. General Ledger is flexible, comprehensive, and easy to use. It is designed to enhance your control over day-to-day operations, while providing the up-to-the-minute information essential to making good management decisions.

General Ledger financial statements can be custom-designed to reflect the unique needs of your company. The financial statement formatting procedure gives you control over the content, sequence, and spacing of every printed line in a financial statement. Financial statements can be generated at any time for any period or range of periods in the current year. Beyond the built-in reports, financial data can be converted into graphs and charts at any time.
